

# Template Week 5 – Operating Systems

Student number: 591658

## Assignment 5.1: Unix-like

### a) Find out what the difference is between UNIX and unix-like operating systems?

UNIX is an operating system (OS) originally developed at Bell Labs. It is trademarked.

Unix-like are OS that share many characteristics with the early UNIX system. These OS may be official UNIX systems or UNIX clones. Official UNIX systems have a direct source code lineage from the original UNIX, while UNIX clones behave like UNIX but don't contain source code from that program.

Examples of official UNIX systems: AIX (developed by IBM), HP-UX (developed by HP), IRIX (developed by Silicon Graphics), Solaris (developed by Sun Microsystems)

Examples of UNIX clones: BSDs (i.e., FreeBSD, NetBSD, OpenBSD and Darwin), Linux, MINIX, QNX and Cygwin

(The Linux Information Project, n.d.)

### b) Study the image above named UNIX timeline. Find out who Ken Thompson, Dennis Ritchie, Bill Joy, Richard Stallman, and Linus Torvalds are and what they have contributed to the development of UNIX or unix-like systems and to IT in general. TIP! English-language sources often contain more detailed information about these individuals.

Ken Thompson and Dennis Ritchie co-created the original UNIX operating system in 1969 and developed C language. UNIX's design becomes the foundation for most operating systems (Linux, macOS and Android) (Computer History Museum, n.d.a).

Bill Joy is key figure in developing the 1984 UNIX version with TCP/IP networking protocols- backbone of modern Internet. He co-founded Sun Microsystems and inspired the development of Java language (University of Michigan Department of Electrical Engineering and Computer Science, 2016).

Richard Stallman founded the free software movement and the GNU project. He is also the main author of the GNU General Public License, the most widely used free software license (Free Software Foundation, 2016).

Linus Torvalds creates the Linux kernel and leads the development of the popular open-sourced Linux operating system (Computer History Museum, n.d.b).

### c) What is the philosophy of the GNU movement?

GNU movement believes that a program's user should be free to copy and change that program without its developers' interference. They advocate for software users' four freedoms: (0) to run the program, (1) to study and change the program in source code form, (2) to redistribute exact copies, and (3) to distribute modified versions (Free Software Foundation, Inc., n.d.).

**d) Does Ubuntu as a Linux operating system conform to the philosophy of the GNU movement?  
Please explain your answer.**

Ubuntu used open-sourced Linux kernel, so Ubuntu is fundamentally built upon free software principles. However, Ubuntu's parent company, Canonical, includes non-free components in some distribution so Ubuntu doesn't completely adhere to the philosophy of GNU movement (Free Software Foundation, 2025).

**e) Find out what is the Windows Subsystem for Linux?**

Windows Subsystem for Linux (WSL) is a feature of Windows that lets users run a Linux environment on their Windows devices, without the need to install virtual machine (Microsoft, 2025).

**f) Find out, which operating system family belongs to Android, iOS and ChromeOS?**

They belong to Unix-like operating systems.

Android and ChromeOS are based on Linux, while iOS belongs to the Unix-like (macOS/Darwin) family.

## Assignment 5.2: Supercomputers and gameconsoles

- a) Research on this site what supercomputers are used for and write a short summary of it:

<https://www.computerhistory.org/timeline/search/?q=Supercomputer>

Supercomputers are used for complex, large-scale calculations in weather forecasting and climate research. They simulate experiments that might be too costly, expensive or dangerous to conduct in reality. A supercomputer consists of thousands of small computers called nodes (Argonne National Laboratory, n.d.).

- b) IBM is a company that has already built a number of supercomputers. One of them is IBM's Roadrunner. The CPU developed for this supercomputer was further developed at a later stage as the CPU for the PlayStation 3 console. Find out what a **PlayStation 3 cluster** is and what it was used for?

A PlayStation 3 (PS3) cluster is a supercomputer built by linking many PS3 consoles together via cables. It delivers supercomputer-level performance at a fraction of the cost of a traditional supercomputer and consumes less energy.

One example is the Condor Cluster, made of 1,760 PS3 consoles. US Air Force uses it for radar enhancement, pattern recognition, satellite image processing, and AI research (Zyga, 2010).

- c) You can build a supercomputer by putting a few computers together in a cluster. Here's what Oracle did with a collection of Raspberry Pi's, for example:

<https://blogs.oracle.com/developers/post/building-the-worlds-largest-raspberry-pi-cluster>

What specific operating system is running on this cluster?

Oracle Linux for ARM

- d) Does Oracle's Raspberry Pi supercomputer appear in the list of the 500 fastest supercomputers in the world? Make a logical decision for this, without going through the entire list.

<https://www.top500.org/lists/top500/list/2023/06/>

My guess: Oracle's Raspberry Pi supercomputer is not in the list of the 500 fastest supercomputers in the world. It is a small-scale project for demonstration, so it is unlikely that it can compete with multi-million dollar high-end supercomputers used for intensive tasks around the world.

- e) What CPU architecture is used for the PlayStation 5 and Xbox Series X?

AMD Zen 2

What operating systems run on these consoles?

PlayStation 5: customized OS based on FreeBSD (a Unix-like OS)

Xbox Series X: Xbox OS, a customized OS based on Windows

What conclusion can you draw from the answer to the previous question?

Besides general-purpose computer market, tech companies can create customized OS that targets specific sectors, such as gaming and healthcare. Those OS are built on a specific architecture (Unix-

like or Window), can address specialized requirements and strengthen company's presence in diversified fields. Controlling the operating system can be a brilliant business strategy to lock customers in an ecosystem.

## Assignment 5.3: Working with Windows

### Take relevant screenshots of the assignments below

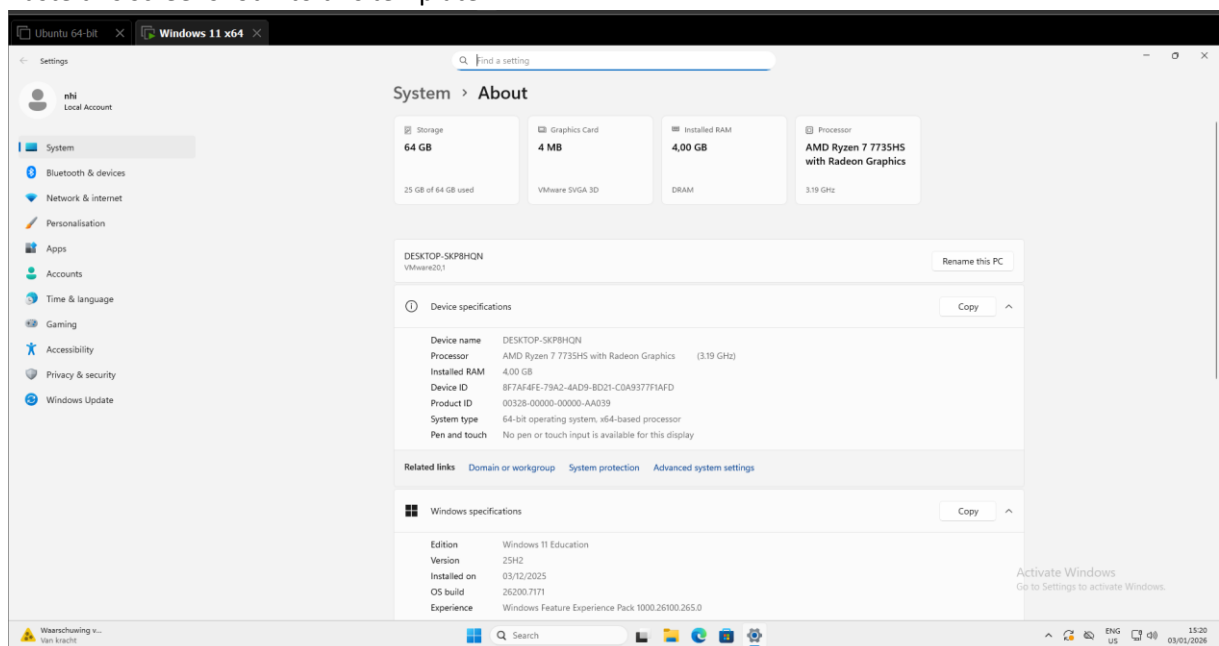

a) Practice for about 10 minutes with the  keyboard shortcuts combinations, skip the general shortcuts in this exercise. Take a look at which screens are opened.

b) The file explorer can be opened with  + E, Which key combination could you also use?

Windows logo key + R, then type explorer and press Enter.

Windows logo key + X, then use the down arrow keys to select "File Explorer" from the Quick Link menu and press Enter.

c) Open the system properties with a  key combination, take a screenshot of the open screen. Paste this screenshot into this template.

d) Open task manager with a key combination. Take screenshots of the tabs: processes (shows active processes), performance, and users. Place these three screenshots in this template.

Nhi - Ubuntu 64-bit

Windows 11 x64

- e) If you're giving a PowerPoint presentation and you connect your laptop to a projector, Windows can use the projector as a second screen. For example, you may have Outlook open on your first screen that you don't show over the projector, while the PowerPoint presentation is displayed on the projector, or the second screen. Which key combination should you use for this?

Window key + P to open the Project menu, then select the Extend option

- f) If you leave the classroom for a while and you leave your laptop behind, it is wise to lock the screen. Your Apps will continue to run in the background. So, for example, if you're waiting for a download that takes a while, lock the screen and get a cup of coffee. Which key combination do you use for this?

Window key +L

- g) Open the Run screen with a key combination. On this screen, type CMD and press <enter>. Take a screenshot of this result and paste it into this template.

## Working in the File Explorer

Relevant screenshots **copy** command:

```
Nhi - Ubuntu 64-bit X Windows 11 x64 X

C:\Windows\System32>
  
```

b) Explain in your own words what exactly the above command does, explain the -e and --id options used as well. Use this site:

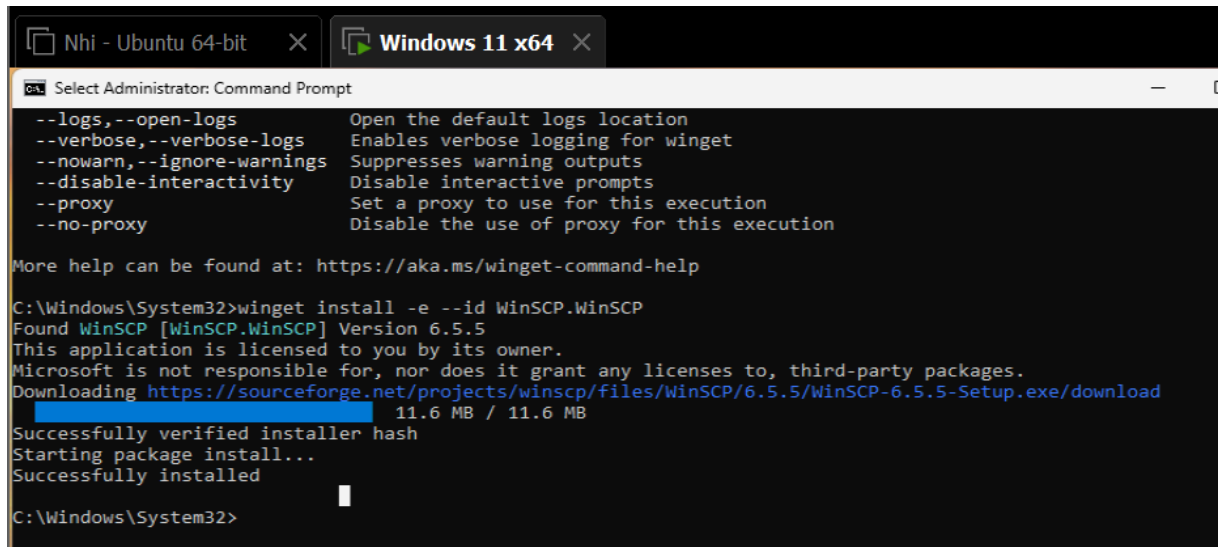

<https://learn.microsoft.com/en-us/windows/package-manager/winget/install>

The command `winget install -e --id Mozilla.Firefox` uses the Windows Package Manager (WinGet) to install Mozilla.Firefox.

The query arguments `-e` and `--id` ensure that only the **exact** match with the unique **ID** Mozilla.Firefox is installed.

c) Relevant screenshots that the following software is installed with winget:

- WinSCP

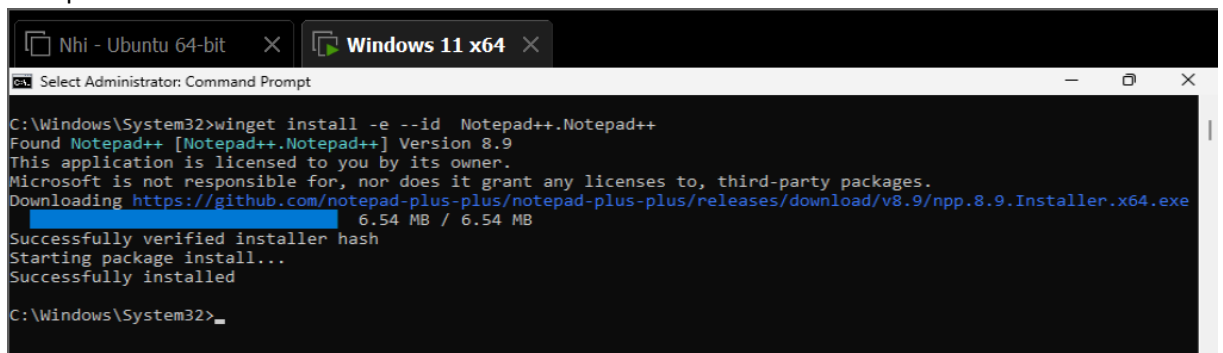

```
--logs,--open-logs      Open the default logs location
--verbose,--verbose-logs  Enables verbose logging for winget
--nowarn,--ignore-warnings Suppresses warning outputs
--disable-interactivity   Disable interactive prompts
--proxy                  Set a proxy to use for this execution
--no-proxy               Disable the use of proxy for this execution

More help can be found at: https://aka.ms/winget-command-help

## Assignment 5.4: Working with Linux

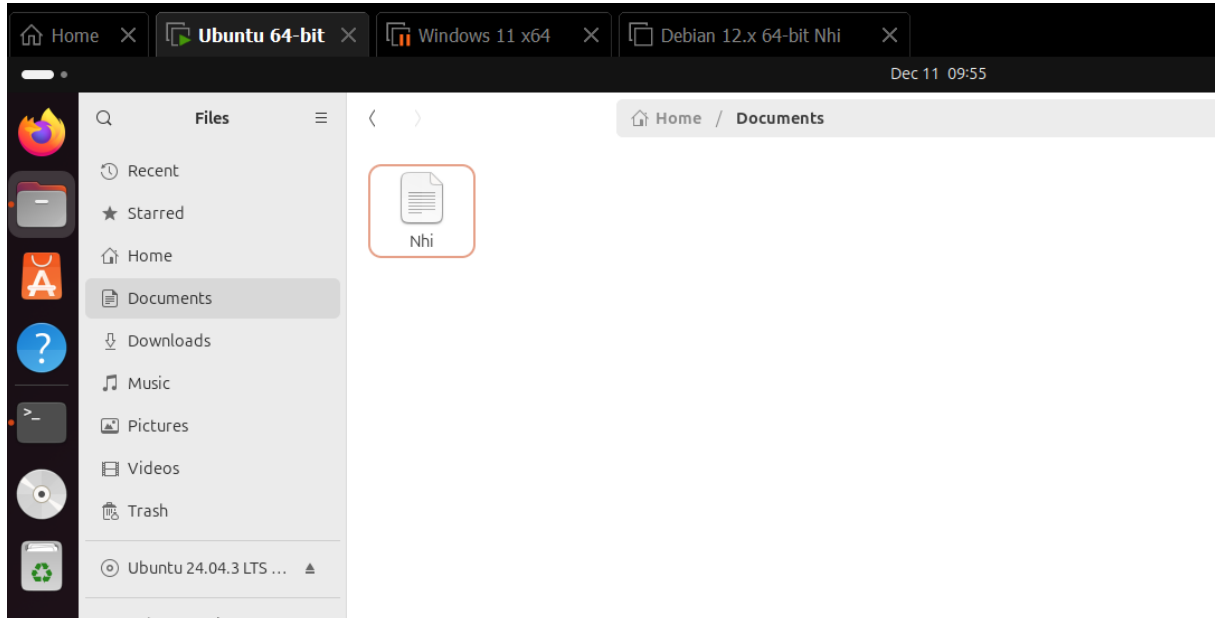

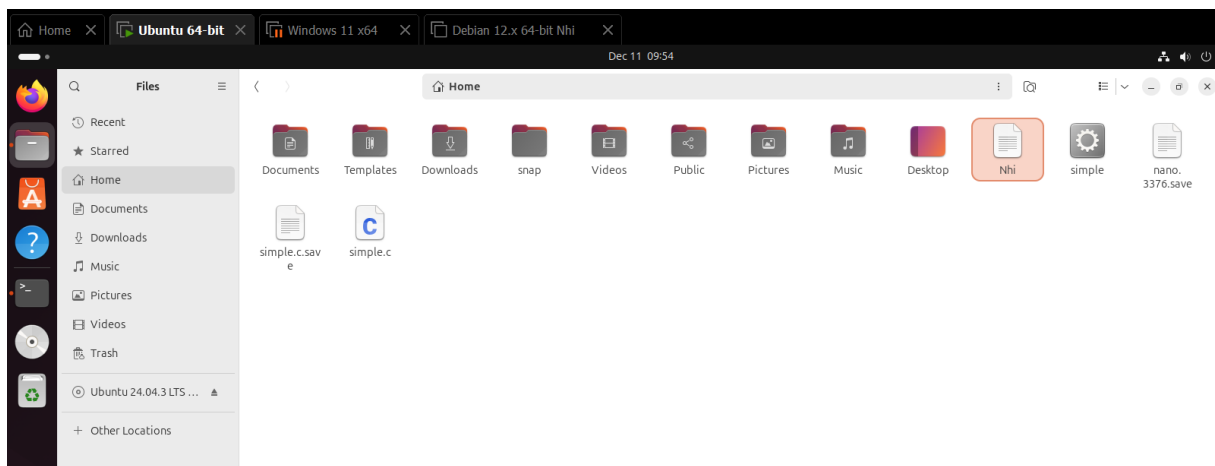

Relevant screenshots + motivation

Create test file and copy it to ~/Documents

```
nhi@nhi-VMware-Virtual-Platform: ~  
nhi@nhi-VMware-Virtual-Platform:~$ touch nhi.txt  
nhi@nhi-VMware-Virtual-Platform:~$ cp nhi.txt ~/Documents
```

Copy the file from Home to Documents directory in file explorer

Navigating the file structure

- Type /etc in address bar to navigate to the etc directory in the file explorer

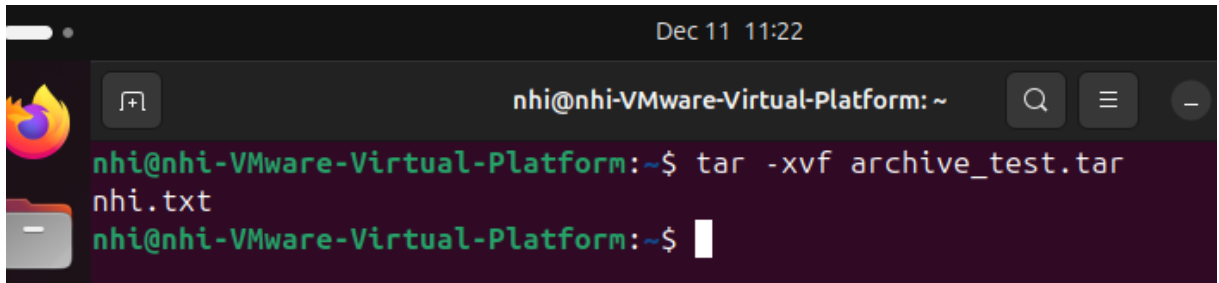

- Compress files

o Which command in the terminal would you use to compress a text file into a tar archive?

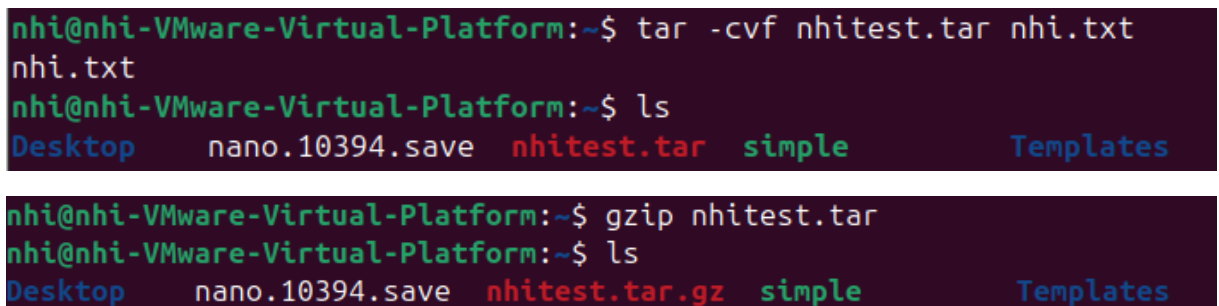

```
nhi@nhi-VMware-Virtual-Platform:~$ tar cvf nhiarchive.tar nhi.txt
nhi.txt
```

o With which command in the terminal would you be able to extract a tar file?

A terminal window titled 'nhi@nhi-VMware-Virtual-Platform: ~' with a search icon and a menu icon. It shows the command 'tar -xvf archive\_test.tar' being executed, which extracts 'nhi.txt'.

```
nhi@nhi-VMware-Virtual-Platform:~$ tar -xvf archive_test.tar
nhi.txt
nhi@nhi-VMware-Virtual-Platform:~$
```

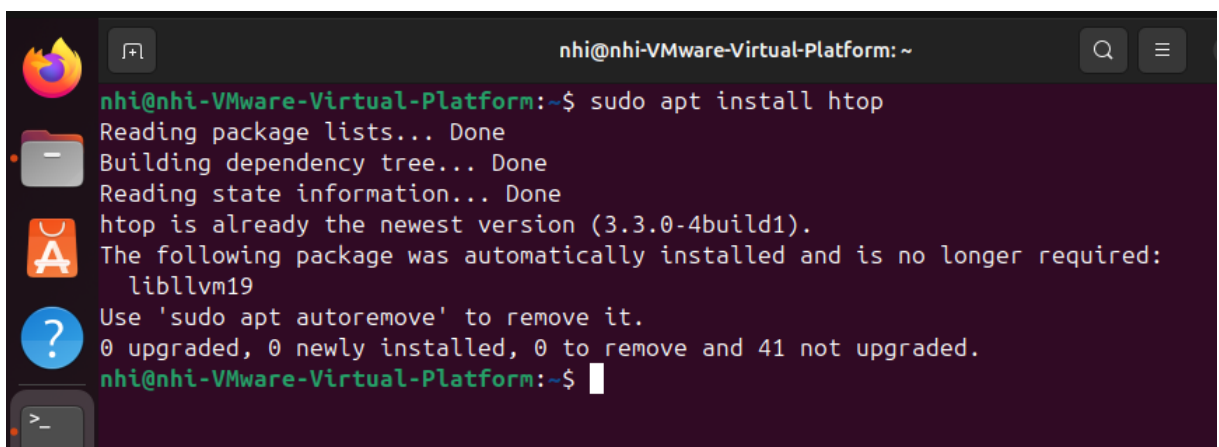

o Compress a text file in a tar archive and compress it with gzip.

A terminal window showing two commands: 'tar -cvf nhitest.tar nhi.txt' and 'gzip nhitest.tar'. It also shows the output of 'ls' before and after, showing the creation of 'nhitest.tar' and then 'nhitest.tar.gz'.

```
nhi@nhi-VMware-Virtual-Platform:~$ tar -cvf nhitest.tar nhi.txt
nhi.txt
nhi@nhi-VMware-Virtual-Platform:~$ ls
Desktop      nano.10394.save  nhitest.tar  simple      Templates
nhi@nhi-VMware-Virtual-Platform:~$ gzip nhitest.tar
nhi@nhi-VMware-Virtual-Platform:~$ ls
Desktop      nano.10394.save  nhitest.tar.gz  simple      Templates
```

- View processes

o Install the application **htop** via a terminal command

A terminal window showing the command 'sudo apt install htop'. The output indicates that htop is already the newest version (3.3.0-4build1) and that libllvm19 was automatically installed and is no longer required. It also shows the command 'sudo apt autoremove' being used to remove it.

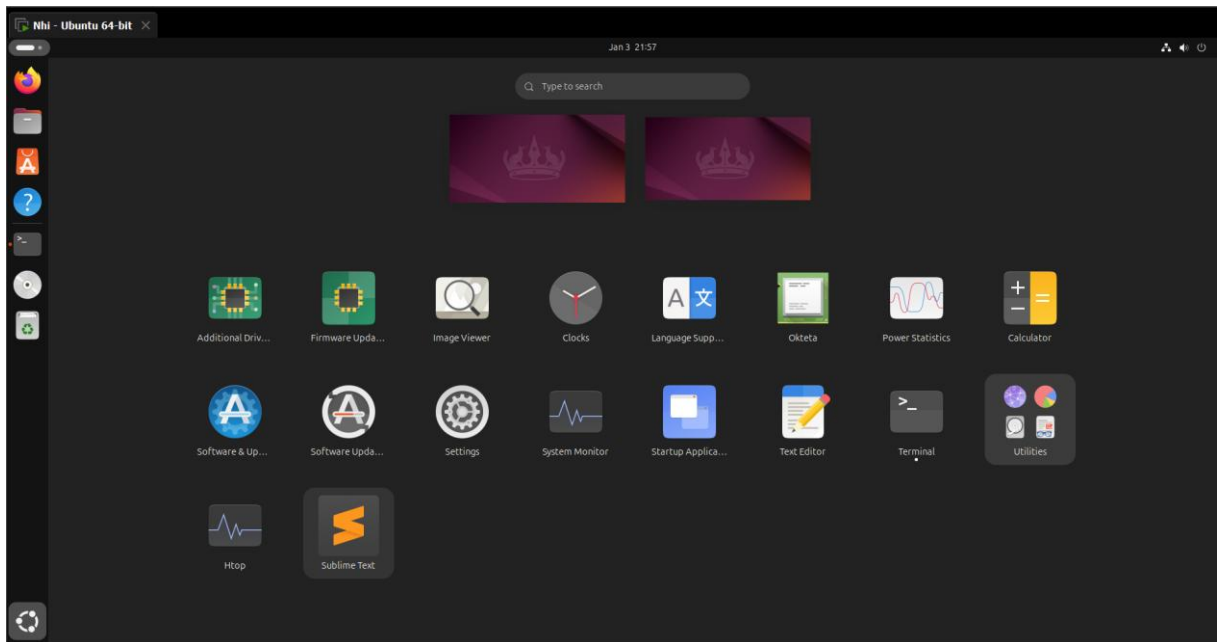

```
nhi@nhi-VMware-Virtual-Platform:~$ sudo apt install htop
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
htop is already the newest version (3.3.0-4build1).
The following package was automatically installed and is no longer required:
  libllvm19
Use 'sudo apt autoremove' to remove it.
0 upgraded, 0 newly installed, 0 to remove and 41 not upgraded.
nhi@nhi-VMware-Virtual-Platform:~$
```

o Launch the htop application. Explain what this application shows.

htop is an interactive interface showing all running processes, along with CPU, memory, and swap usage. It is equivalent of Window Task Manager in Ubuntu.

- Install Software

o Software can be installed via the terminal in Ubuntu as we just did in the previous assignment, but it can also be installed in Ubuntu via the Software center. Find and install the **Sublime Text application** on your Ubuntu VM

o Using a terminal command, install the **neofetch** application. What does this application show when you launch it?

It displays my computer's system information (OS, kernel, CPU, GPU, RAM, etc.) next to a logo of my OS in ASCII

Install neofetch

```
nhi@nhi-VMware-Virtual-Platform:~$ sudo apt install neofetch
[sudo] password for nhi:
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
neofetch is already the newest version (7.1.0-4).
The following package was automatically installed and is no longer required:
  libllvm19
Use 'sudo apt autoremove' to remove it.
0 upgraded, 0 newly installed, 0 to remove and 41 not upgraded.
nhi@nhi-VMware-Virtual-Platform:~$
```

Run neofetch:

```
nhi@nhi-VMware-Virtual-Platform: ~

## Assignment 5.5: Users and permissions on Linux

Relevant screenshots + motivation

Create hello.sh file

```
nhi@nhi-VMware-Virtual-Platform:~$ nano hello.sh
```

Add content to hello.sh file, save and exit

```
GNU nano 7.2 hello.sh  
#!/bin/bash  
echo Hello Nhi, 591658 !
```

Create directory hello

```
nhi@nhi-VMware-Virtual-Platform:~$ mkdir hello
```

Move hello.sh into ~/hello

```
nhi@nhi-VMware-Virtual-Platform:~$ mv hello.sh ~/hello
```

Make the file executable only for the logged-in user but give other groups read-only permission

```
nhi@nhi-VMware-Virtual-Platform:~/hello$ chmod 744 hello.sh
```

Run i./hello.sh

```
nhi@nhi-VMware-Virtual-Platform:~/hello$ ./hello.sh  
Hello Nhi, 591658 !
```

## Assignment 5.6: View the contents of files

Relevant screenshots + motivation

How many lines does the file have? 12304 lines

```
nhi@nhi-VMware-Virtual-Platform:~/Downloads$ wc -l sherlock.txt
12304 sherlock.txt
```

How many words? 107560 words

```
nhi@nhi-VMware-Virtual-Platform:~/Downloads$ wc -w sherlock.txt
107560 sherlock.txt
```

And how many characters? 593 837 characters

```
nhi@nhi-VMware-Virtual-Platform:~/Downloads$ wc -m sherlock.txt
593837 sherlock.txt
```

- On which lines is the word "kingdom" in the file? **TIP!** grep -n

Line 490 and line 1124

```
nhi@nhi-VMware-Virtual-Platform:~/Downloads$ grep -n "kingdom" sherlock.txt
490:"I tell you that I would give one of the provinces of my kingdom to
1124:And that was how a great scandal threatened to affect the kingdom of
nhi@nhi-VMware-Virtual-Platform:~/Downloads$
```

- Use the head and/or tail commands to see the 20 words above and below the word "kingdom" on the screen

Line 490 has the word "kingdom".

20 line after =>490+20= line 510

Command head -n 510 sherlock to take first 510 lines

From line 510, tail command cuts 41 lines before it to get both 20 lines before and after line 490

```
nhi@nhi-VMware-Virtual-Platform:~/Downloads$ head -n 510 sherlock.txt | tail -n 41
```

## Assignment 5.7: Digital forensics

Relevant screenshots + motivation

### EXIF

- Identify phone brand/type:

Phone moto g(6) play, Motorola branch

Run exif to find out details of the picture. These details include which device was used to take the picture, as well as the GPS of the location.

```
nhi@nhi-VMware-Virtual-Platform:~/Assignment$ exif oldcar.jpg
EXIF tags in 'oldcar.jpg' ('Motorola' byte order):

```

### BASE64

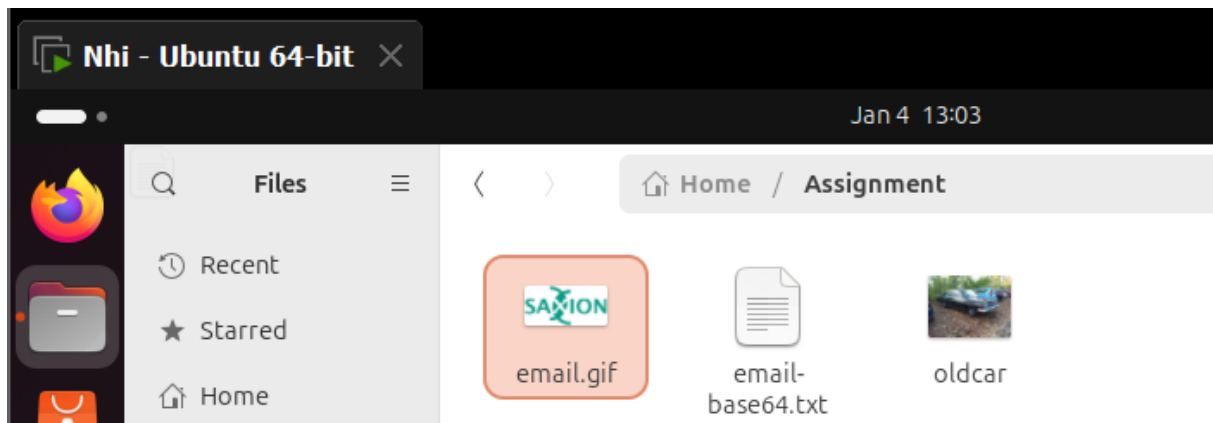

Decode the BASE64 String from email-base64.txt, and save the output as a binary **gif** file.

base64 -d decodes the string

> email.gif sends the output to a new file(email.gif) instead of the terminal in Linux

file email.gif checks the file type

```
nhi@nhi-VMware-Virtual-Platform:~/Assignment$ base64 -d email-base64.txt > email.gif
nhi@nhi-VMware-Virtual-Platform:~/Assignment$ file email.gif
email.gif: GIF image data, version 89a, 108 x 52
```

### Assignment 5.8: Steganography

Relevant screenshots + motivation

Use steghide extract to extract the message, then use cat to read the message file

```
nhi@nhi-VMware-Virtual-Platform:~/Assignment$ steghide extract -sf apple2.jpg
Enter passphrase:
wrote extracted data to "message.txt".
nhi@nhi-VMware-Virtual-Platform:~/Assignment$ cat message.txt
Hello class.
You have almost completed Week 5.
```

### Assignment 5.9: Capture disk images

Make relevant screenshots + motivation:

- Proof that the Debian 13 server stored a back-up image of the Ubuntu 24.04 Desktop VM.
- Proof that you can restore the back-up image into an empty VM.

### Documentation of steps

o Screenshots or terminal logs showing:

▪ Debian server setup

```
nhi@omv:~$ sudo apt update
Hit:1 http://deb.debian.org/debian trixie InRelease
Hit:2 http://deb.debian.org/debian trixie-updates InRelease
Hit:3 http://security.debian.org/debian-security trixie-security InRelease
1 package can be upgraded. Run 'apt list --upgradable' to see it.
nhi@omv:~$ _
```

```
nhi@omv:~$ sudo apt install openssh-server -y
openssh-server is already the newest version (1:10.0p1-7).
Summary:
  Upgrading: 0, Installing: 0, Removing: 0, Not Upgrading: 1
```

```
nhi@omv:~$ sudo systemctl enable --now ssh
Synchronizing state of ssh.service with SysV service script with /usr/lib/systemd/systemd-sysv-install.
Executing: /usr/lib/systemd/systemd-sysv-install enable ssh
nhi@omv:~$
```

Ip a to find Debian server's IP

```
nhi@omv:~$ sudo mkdir -p /srv/images
nhi@omv:~$ sudo chown $USER:$USER /srv/images
nhi@omv:~$ ip a
1: lo: <LOOPBACK,UP,LOWER_UP> mtu 65536 qdisc noqueue state UNKNOWN group default qlen 1000
    link/loopback 00:00:00:00:00:00 brd 00:00:00:00:00:00
    inet 127.0.0.1/8 scope host lo
        valid_lft forever preferred_lft forever

16384+0 records out
68719476736 bytes (69 GB, 64 GiB) copied, 1176.79 s, 58.4 MB/s
ubuntu@ubuntu:~$
```

#### ▪ Image storage

Ls /srv/images in Debian VM to confirm that the image is captured.

```
nhi@omv:~$ ls /srv/images
ubuntu2404_vm.img.gz
nhi@omv:~$
```

#### ▪ Restore process

Create a new blank VM with similar setting as the original

Restore the captured image in the blank VM while in live environment.

```
ubuntu@ubuntu:~$ ssh nhi@192.168.151.128 "cat /srv/images/ubuntu2404_vm.img.gz" | gzip -d | sudo
dd of=/dev/nvme0n1 bs=4M status=progress
